HOW WE CAN HELP OUR MIDSTREAM CAPABILITIES

Since inception, Leader Engineering has played a major role in the midstream oil and gas markets, supporting pipeline maintenance, installation and design projects globally.

We take pride in being the partner of choice on new projects across North America. Our personnel are supporting a variety of developments throughout Alaska, the Rocky Mountain Region, the Gulf Coast, and the major Shale plays in the US.

As America pursues its goal of energy independence, the infrastructure – the transportation network, processing facilities and support systems – is a major focus of attention.

As the infrastructure grows, so does the need to ensure the right people – the best people – are shaping and delivering it.

That's why clients are turning to us: they enjoy the confidence that comes with knowing the personnel working for them are Leaders.

INTELLIGENT RECRUITMENT. SIMPLIFIED.

OUR MIDSTREAM CAPABILITIES

WHY WORK WITH US?

INTELLIGENT RECRUITMENT. SIMPLIFIED. This statement underpins everything we do: finding world-class, qualified talent that is ready to contribute to your operations immediately. This may be a simple objective, but in practice it is an incredibly complicated challenge. For over 10 years the Leader family has been committed to delivering this promise.

HOW WE WORK

1. TECHNICAL APTITUDE

First and foremost, technical aptitude. All of our training is conducted by our board of former oil field engineers and executives who have worked in a variety of roles and staffed multiple projects. Thus, our recruiters have a clear and concise understanding of the midstream sector. They know the questions to ask, they know the qualifications required, and they understand your everyday challenges.

2. REPUTATION

Second, our reputation is everything to us. It defines who we are and the work we do. We take every possible step to ensure our industry standing – and your operations – are never compromised. It's a reputation that is underpinned by the core principles that direct our everyday work: communication, support, honesty, diligence, curiosity and partnership.

3. THE CANDIDATE

Once we've identified a candidate that we believe meets our stringent specifications, our job is only beginning. We leave no stone unturned in our work to understand each career move and personal attributes, including strengths and weaknesses and, most importantly, technical competence.

4. RELATIONSHIPS

The oil & gas industry may be global, but it's still a close community. We take advantage of the many extensive relationships that we've developed over the years to ensure that the personnel supplied by Leader Engineering are of the highest caliber.

5. ULTIMATE OBJECTIVE

Our ultimate objective is always the same: to provide a qualified individual that will join your operations fully accredited and ready to make an immediate positive contribution. We have the experience, the resources and the passion to make sure that's the case.

TEAM

We've taken our service offering in the US to the next level by opening an office in Houston, Texas. We've assembled a team of outstanding recruitment professionals to write this exciting new chapter in our story.
